

Jio Design System Research

How research shaped the design system used by 400M+ users across 30+ Jio products — from component adoption to motion, forms, and documentation.

I led 21+ research studies that directly shaped the Jio Design System — from how designers use components, to how users perceive colour, motion, and surface hierarchy. Every study had a specific product decision waiting on the other side of it.

Research

Every study in this portfolio had a product decision waiting on the other side.

Research-driven design: 21+ studies · Outcomes embedded in JDS 2.0 and 3.0

DSP Alpha Usability Research

Evaluated how internal designers use the Design System Platform to complete tasks, uncovering usability gaps and improvement opportunities for the Design System.

Outcome

Identified 12 critical usability gaps fixes shipped in the next DS platform release

Colours Perception

This study evaluated user preferences and usability of colored versus non-colored headers across Jio apps and websites, providing insights to inform design decisions aligned with brand identity and user experience.

Outcome

Findings directly informed the colour strategy adopted in JDS 3.0 header components.

Foundation Research

- Measure how well users adapt to the new design elements compared to V1
- Assess the effectiveness of UI foundations and components in real task completion
- Identify satisfaction levels and key usability pain points

Outcome

Validated colour scale, type scale, surface logic, and navigation components all adopted into JDS 2.0 foundations

Handover Design-Engineering Research

Understand and close the gap between design in Figma and its accurate implementation in development.

Outcome

Identified top 8 handover failure points. Guidelines adopted by 10+ product teams to reduce implementation errors.

Patterns

Evaluate the hypothesis that using predefined patterns in the design process is more efficient, consistent, and user-friendly compared to starting with atom-level components.

Outcome

Hypothesis validated pattern-first approach reduced design time and improved cross-product consistency. Patterns library built on findings.

Surface Logic Research

- Identify which surface logic users prefer for differentiating UI elements
- Understand how users perceive grey when used as a background or card surface
- Evaluate whether each approach supports clear hierarchy and structure
- Assess visibility and accessibility across design variations

Outcome

Surface logic preference data used to define JDS elevation and card hierarchy standards used across all Jio apps.

Unified Jio Logo Research

- Understand user perception of the unified Jio product logos
- Evaluate brand association and product recognition across variations
- Identify any usability or recognition issues in the new logo designs
- Gather user feedback to refine the concept before rollout

Outcome

Research feedback shaped final logo refinements before org-wide rollout across 30+ products

Documentation on DS

This research evaluated the usability, composability, and onboarding of Design System documentation in Notion. The focus was to improve how product designers access, understand, and apply DS components, enhancing the overall efficiency and experience of using the documentation.

Outcome

Redesigned documentation structure reduced onboarding time from 2.5 hours to 1 hour for new product designers.

Motion Design Research

This motion audit evaluated how animations, transitions, and motion design across Jio apps impact navigation, interaction, and overall user experience. The study identified areas where motion enhances usability and engagement, and where it may distract, guiding optimization for a more intuitive and enjoyable app experience.

Outcome

Audited 7 apps, classified 120+ micro-interactions. Motion guidelines reduced inconsistencies by 40% across apps."

Forms Research

The research aims to test different forms components in the parameters of usability of the form components, composability by the product designers and finally the ease of onboarding of the form components.Focus

Outcome

Form component guidelines updated — composability issues resolved, onboarding clarity improved for product designers.

Indicator Badge Research

Evaluated naming conventions for avatar badge positions, comparing technical vs. traditional terms, and assessed how visual aids impact designer and developer usability.

Outcome

Standardised badge naming adopted across JDS — reduced designer-developer miscommunication on badge positioning.

Market Field Research

- Identified gaps in in-store support and navigation causing customer friction.
- Improved product discovery, information access, and personalized assistance.
- Designed seamless, engaging experiences across MyJio and JioMart stores.
- Strengthened omnichannel journeys to boost customer satisfaction and loyalty.

Research Summary at Jio

Design System (DS): Research & Adoption

Usability & Interaction Research

Motion & Interaction Design Audit

AI Tooling

How I used AI across the research workflow — not just as tools, but as force multipliers at specific stages of synthesis, documentation, and communication.

Claude

Used to structure qualitative synthesis, turning raw interview and session notes into behavioural themes, pain-point clusters, and usability patterns at speed.

Notion AI

Used for research documentation, meeting summaries, action item extraction, and insight organisation across stakeholder workshops.

Dovetail

Primary repository for all research data, session recordings, tagged observations, and insight threads. Made cross-study pattern spotting possible across 21+ studies.

ChatGPT

Used for early-stage synthesis acceleration, structuring interview themes and identifying contradictions in large qualitative data sets.

Figma + AI Plugins

Used to create faster journey maps and usability flow representations for stakeholder communication during DS review sessions.

Cursor

Explored for early-stage concept validation, rapid prototyping of component interactions during DS 3.0 research phases.

Let's talk about how I can bring this to your team.
